Operator's Seat

An AI chief of staff for you and your business, built for privacy and portability. Seven steps, in order: one a day or back-to-back.

1 **Copy the folders and let it interview you.**
Unzip, copy Starter, rename it. Attach it as a project (Claude: Projects, +, Use an existing folder. ChatGPT: Work, project, Add folder). Type "Read AGENTS.md, then interview me." About half an hour.

2 **Catch it being wrong.**
New conversation. Ask: "What should I be careful about this week?" Correct what it misses. If it doesn't offer to save, say "Save that to [your folder]."

3 **Tell it five true things.**
Say: "Here are some things that are true about my work. File them in [your folder]." Or drop files in 0. Inbox and say "Sort my inbox." Then ask something only those facts answer.

4 **Fill in one project.**
Step 1 made a folder for each project you named. Say: "Let's fill in [project name]." New conversation: ask what's due.

5 **Give it one rule.**
Something you've corrected twice, or anything you always want. Say: "From now on, [the rule]. Make that a rule in [your folder]." Then: "Show me the line and the file it's in."

6 **Do the Friday audit together.**
Whatever day it is, once now. Say: "Run the Friday audit." Approve what it saves. Then: "Put fifteen minutes on my calendar every Friday for this."

7 **Run the first feed, then schedule it.**
Say: "Run the first feed." Read what it found. If it's useful: "Schedule that for Friday mornings."

That's it.

Seven steps. One habit. You never opened a file, and you made every decision. The AI files as you go; you do Fridays. Skip Fridays and it rots in about six weeks.

Switching AIs: attach the same folders in the other app and say "Read AGENTS.md first." No second interview. The folders are yours, not any one AI's.

Operator's Seat v0.9, October 2026. START HERE.md has the full seven steps; Why it works.md has the reasoning. Reuse terms: see REUSE.md.
